SKILLS

Skill	Proficiency	Skill	Proficiency
Python	Expert	Design & Build Enablement	Beginner
Build Management	Beginner	GitHub	Proficient
AWS Redshift	Beginner		

Having 4.2 years of experience with 2.7 years into IT Industry as Software Engineer and 1.5 years into Non-IT as German Language Expert

- ✓ Good experience on Object Oriented Programming and modules Os, Random, Re, Json, Multiprocessing
- ✓ Good experience on external packages redfish Restful API, Pandas, Teradatasql, Configparser, Pywinauto, subprocess, lxml
- ✓ Good experience on Server development, ETL automation, GUI automation, server automation using Python
- ✓ Working in AWS Cloud technologies like Amazon Redshift , Lambda and S3 File system
- ✓ Basic Knowledge on creating views, Forms, templates, models with Django.
- ✓ Able to work collaboratively with developers, testers and other team members.
- ✓ Basic knowledge in Database Design, Creation and Management of Schemas, DDL, DML SQL queries
- ✓ Interact with the clients on daily basis

CURRENT PROJECT/ASSIGNMENT

Merck CIM - MERCK

Role: Application Developer

Description: Develop ,Design, build and configure applications to meet business process and application requirements, by enabling audit logging for Amazon redshift logging , logs will be stored in S3 for permanently on top of those logs we are creating tables and performing query operation to know like who and when connected , which operation performed by using redshift spectrum

Responsibilities:

- Created lambda function in python to connect and fetch the data from S3
- Created crawler and run it for tables in AWS Glue
- Ran ETL jobs for data
- Designed documentation of low-level design and high level documentation

PRIOR WORK EXPERIENCE

Project 1:

DB Migrator(Charles Schwab): Extracting the data from Teradata and transferring, loading into GCP ,after creating test jobs and scheduling those jobs using control M and first checking these jobs manually after that automating those jobs by Python and validating the logs whether jobs are running successfully or not.

Technology : Python
Role : ETL Developer
Framework : RTF Framework
Database : Teradata , GCP

Responsibilities:

- Developing new library functions if not available, and integrating the same with the existing libraries
- Automating Test Jobs using python.
- Created database connection , extracted transferred and loaded into destined database.
- Checking and executing queries in python.
- Connecting to Teradata database and executing queries.
- Interact with the clients on daily basis,

Project 2

VCOSMOS(HP Desktop and Laptop): This project is based on Automation of Acceptance Testing of different features of hp commercial laptop Python Based scripting to validate all the typical features of a hp commercial Laptops. The testing process is done on multiple Laptops/Desktops from remote location. This process is automated using Robot Framework and Python

Technology : Python

Role : Automation Developer

Responsibilities:

- Developing new library functions if not available and integrating the same with the existing libraries.
- Running individual scripts on Jenkins.
- Developing scripts for rest using Redfish rest API
- Managed code using source code management tool GIT.
- Study requirement documents to understand project / product requirements.
